Please, be advised the following items are available from stock:

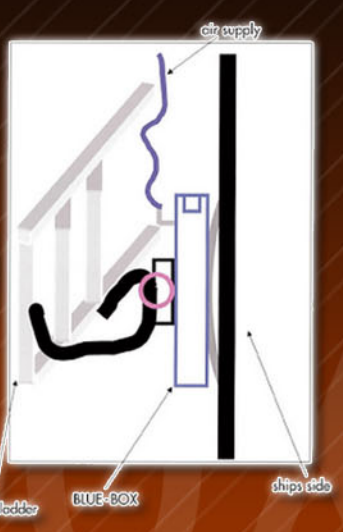
HULL MAG PILOT LADDER MAGNET

Specifically developed to make life safer for sea harbour pilots by providing removable anchor points for the ladder on the ship's side. These Hull Magnets, designed to withstand aggressive marine environments, have no internal moving parts or entry points for sea water.
Hull magnets are also used to anchor floating spill booms and aintenance vessels and are also known as Boom Magnets.

- Powder-coating in safety yellow for high visibility
- Resin encapsulation of magnetic elements
- Suitable for marine use

BLUE BOX PILOT LADDER

The "Blue Box" suction pad is used to secure the bottom of the accommodation ladder to the ship's side and insures the ladder rests firmly against the ships side in a cost effective, safe and practical manner.
Power supply: compressed air (without electrical energy!)
Pressure range 25 to 102 PSI
If compressed air supply is interrupt, holding force = 0 N
Compact solution, Weight only 7,0 kg, easy to handle



- Higher safety at pilot transfer
- No more uncontrolled movements at sea
- Usable on different materials
