RESPIRATORY PROTECTION

FILTERS
SERIES 230

The **series 230** includes particulate, gas, vapour and combined filters. The filter case is made of light, impact resistant, synthetic resin. Directly connectable to the half mask POLIMASK 230. By using the threaded adapter *(code 42010600)* conforming with EN 148/1, they can also be fitted on the **POLIMASK® 330 half masks, POLIMASK® 2000 Gamma or on the C607 SFERA**, **IDEA** and **SELECTA full face masks.**

MAIN FEATURES

- All class P3 filters are provided with **BIOSTOP** paper, blocking the growth of fungi and moulds on the filters themselves, if they are exposed to such agents, and making hangling and disposal more hygienic.
- **COMPACT** filters provide a protection far above the minimum norm requirements, though with reduced volumes. All the other features remain unaltered.

DUST FILTERS

- Conform to **EN 143** requirements and therefore to the local European countries standards. Available in classes **P2** and **P3 BIOSTOP**. They are made by an encapsulated pleated paper disc.
- The filtering efficiency far exceeds minimum required by standards without affecting breathing resistance, thanks to the extensive filtering surface.
- The material is impermeable to water, preventing reduction of performance when used in high humidity conditions.

GAS FILTERS

- Conform to EN 14387 requirements and therefore to the local European countries standards.
- The granular active charcoal chemically and/or physically removes contaminant gases and vapours

COMBINED FILTERS

- Conform to EN 14387 requirements and therefore to the local European countries standards.
- These cartridges offer good protection, where both dust and gas are present.

N.B. For selection and use of filters, see the Sèkur Filter Selection Chart.
